Universidad de Oviedo

## Activity 1. Factor 1: problem size

| n      | Time (milliseconds) |
|--------|---------------------|
| 10000  | 1549                |
| 20000  | 6533                |
| 40000  | 26166               |
| 80000  | OoT                 |
| 160000 | OoT                 |
| 320000 | OoT                 |
| 640000 | OoT                 |

## Activity 2. Factor 2: computer performance

If we compare the time obtained in the previous exercise (done with the computer of the lab), with the time obtained with my own computer we obtain the following results:

| n      | Time of the<br>computer of the lab | Time with my own<br>computer | Difference (own computer<br>– lab computer) |
|--------|------------------------------------|------------------------------|---|
| 10000  | 1549                               | 2126                         | 577   |
| 20000  | 6533                               | 8842                         | 2309  |
| 40000  | 26166                              | 33951                        | 7785  |
| 80000  | OoT                                | OoT                          | --  |
| 160000 | OoT                                | OoT                          | --  |
| 320000 | OoT                                | OoT                          | --  |
| 640000 | OoT                                | OoT                          | --  |

**Computer of the lab:** RAM: 16GB; CPU: 12th Gen Intel(R) Core(TM) i5-12400 2.50 GHz.

| Algorithmics | Student information | Date       | Number of session |
|--------------|---------------------|------------|-------------------|
|              | UO: 300827          | 03/02/2025 | 0                 |
|              | Surname: Leiras     |            |                   |
|              | Name: Sofía         |            |                   |

**My own computer:** RAM: 16GB; CPU: 11th Gen Intel(R) Core(TM) i7-1185G7 @ 3.00GHz  
3.00 GHz

We can conclude that the first computer is faster than the second one.

## Activity 3. Factor 3: implementation environment

| n      | Java  | Python | Difference (Python - Java) |
|--------|-------|--------|----------------------------|
| 10000  | 392   | 2126   | 1734                       |
| 20000  | 1415  | 8842   | 7427                       |
| 40000  | 5619  | 33951  | 28332                      |
| 80000  | 21854 | OoT    | --                         |
| 160000 | OoT   | OoT    | --                         |
| 320000 | OoT   | OoT    | --                         |
| 640000 | OoT   | OoT    | --                         |

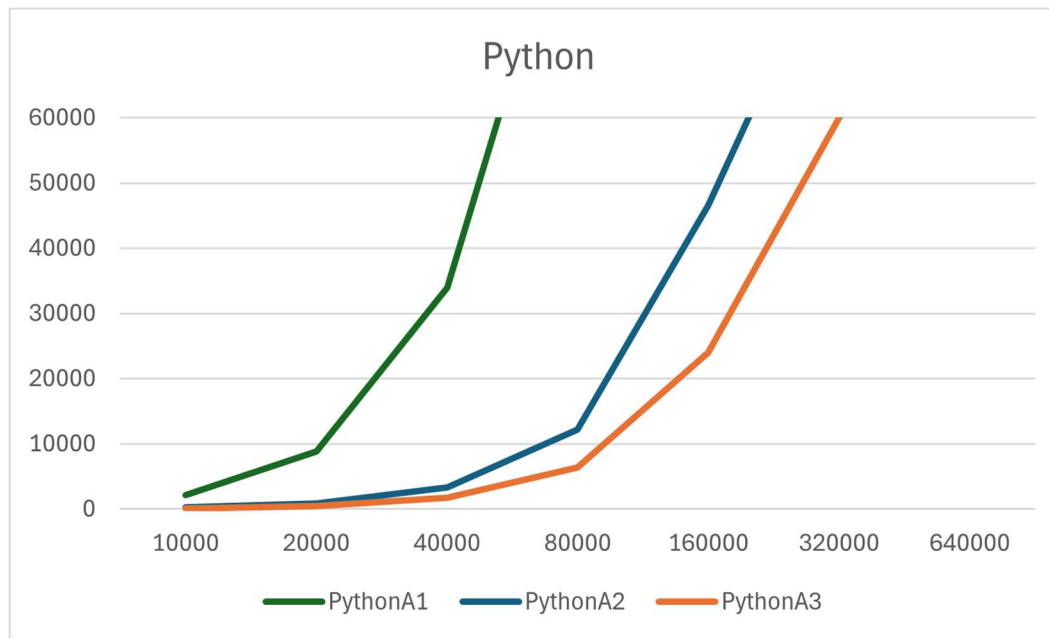

We can conclude that, using Java, the program is run faster than using Python.

## Activity 4. Factor 4: algorithm that is used

Table showing the execution time in Python:

| n      | PythonA1 | PythonA2 | PythonA3 |
|--------|----------|----------|----------|
| 10000  | 2126     | 269      | 122      |
| 20000  | 8842     | 888      | 477      |
| 40000  | 33951    | 3358     | 1784     |
| 80000  | OoT      | 12214    | 6391     |
| 160000 | OoT      | 46529    | 24003    |
| 320000 | OoT      | OoT      | OoT      |
| 640000 | OoT      | OoT      | OoT      |

| Algorithmics | Student information | Date       | Number of session |
|--------------|---------------------|------------|-------------------|
|              | UO: 300827          | 03/02/2025 | 0                 |
|              | Surname: Leiras     |            |                   |
|              | Name: Sofía         |            |                   |

**Table showing the execution time in Java WITHOUT optimization:**

| n      | JavaA1 | JavaA2 | JavaA3 |
|--------|--------|--------|--------|
| 10000  | 392    | 43     | 24     |
| 20000  | 1415   | 151    | 80     |
| 40000  | 5619   | 544    | 294    |
| 80000  | 21854  | 2031   | 1091   |
| 160000 | OoT    | 7656   | 4048   |
| 320000 | OoT    | 28589  | 15410  |
| 640000 | OoT    | OoT    | 58052  |

| Algorithmics | Student information | Date       | Number of session |
|--------------|---------------------|------------|-------------------|
|              | UO: 300827          | 03/02/2025 | 0                 |
|              | Surname: Leiras     |            |                   |
|              | Name: Sofía         |            |                   |

Table showing the execution time in Java WITH optimization:

| n      | JavaA1 | JavaA2 | JavaA3 |
|--------|--------|--------|--------|
| 10000  | 67     | 11     | 6      |
| 20000  | 258    | 30     | 16     |
| 40000  | 1035   | 103    | 60     |
| 80000  | 4113   | 385    | 197    |
| 160000 | 16337  | 1425   | 717    |
| 320000 | OoT    | 5386   | 2696   |
| 640000 | OoT    | 20345  | 10166  |

| Algorithmics | Student information | Date       | Number of session |
|--------------|---------------------|------------|-------------------|
|              | UO: 300827          | 03/02/2025 | 0                 |
|              | Surname: Leiras     |            |                   |
|              | Name: Sofía         |            |                   |

In conclusion, we can assure that Java executes significantly faster than Python, with even its unoptimized versions. Besides, among the three implementations (A1, A2, and A3), A3 consistently delivers the best performance, suggesting a more efficient algorithm. In summary, for tasks requiring high performance and scalability, optimized Java implementations are the best ones.

Finally, I will show the execution times obtained when running the same program with a more optimized implementation:

| n      | JavaA4 |
|--------|--------|
| 10000  | 1      |
| 20000  | 2      |
| 40000  | 5      |
| 80000  | 11     |
| 160000 | 26     |
| 320000 | 63     |
| 640000 | 158    |
